To whom it may concern:

For a long time we had problems with asphalt in our log sorting area. The heavy forklifts tore the asphalt up and we had to replace the asphalt with the underlay every year. Since this is under constant wear and tear on a daily basis we had to find a better solution.

So, we contacted Megatrade OÜ.

As a solution Megatrade OÜ offered us to use a technology called **StabilRoad®**. The work was done with good quality and after installing the **StabilRoad®** technology we have not had any problems with the roads in our log sorting area for two years now.

We recommend Megatrade OÜ since their work quality was very good and has eliminated a very problematic area in our production that always needed constant attention.

Sincerely,

Margus Reisman  
Forklift Maintenance Manager
